

REFORMER ALUMINUM

The Reformer is the most recognizable and versatile piece of Pilates equipment. Originally created to support recovery and rebuild strength, it has become a core element of both training and rehabilitation.

With its sliding carriage, spring resistance, and adjustable straps, the Reformer enables controlled, precise movement while both supporting and challenging the body. It helps develop strength, mobility, and body awareness, with a strong emphasis on alignment and control.

For decades, it has remained a central tool in Pilates practice — combining simplicity of design with exceptional training possibilities.

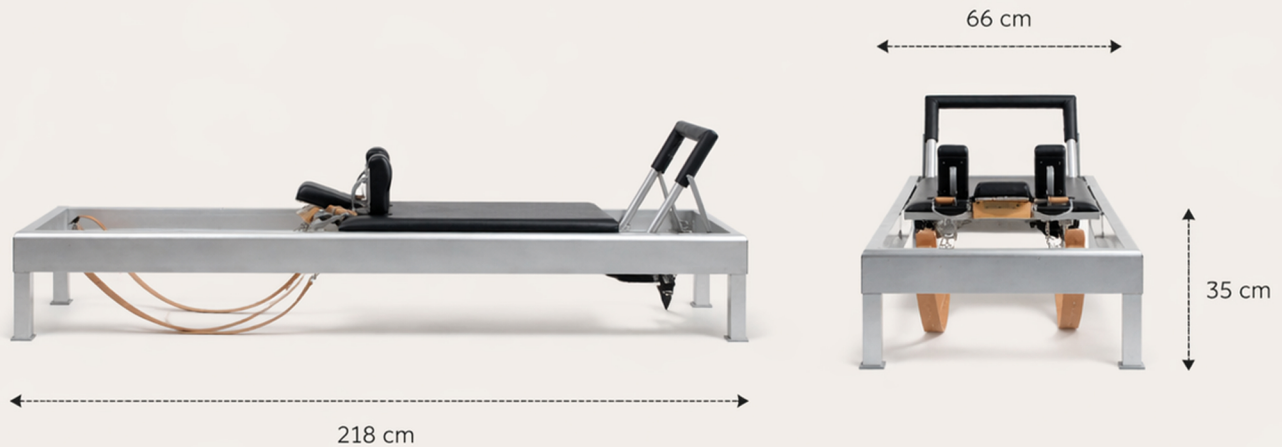

Our Reformers are built with practitioners in mind — carefully refined to deliver balance, durability, and an authentic classical feel.

Specifications:

- powder-coated steel frame
- leather straps
- padded footbar
- 20" foot straps
- long & short box
- 2 gear blocks / stoppers
- 4 springs
